

Nomad Expands in France to provide on-train WiFi to passengers and operational benefits to train operators

Nomad Digital Ltd, the leading global provider of on train communications systems, is opening a new branch in France. After several years of sales effort in the country, Nomad is poised to announce new business in France. In order to deliver effectively and to develop new contracts Nomad has opened a new office in central Paris and has appointed Olivier Bourhis to lead the new unit.

Olivier remarked “This is a great time to be joining Nomad, when significant French opportunities are emerging, and Nomad is having such extraordinary success in other countries. The potential for WiFi on trains in France is largely unexploited and, of course, the operational benefits that flow from having connected trains will be of huge benefit to French rail operators at a time when costs are under such close examination”

Nigel Wallbridge, CEO of Nomad commented “The French rail market is one of the largest and most important in the world and this investment represents just the start of our commitment to serve French customers. We are delighted to welcome Olivier, already involved in our French development to the team, to build on the solid foundation. Olivier has been instrumental in developing key relationships within the sector and his knowledge of the market is second to none.”

About Nomad Digital

Nomad is a rapidly-growing privately owned company which focuses on the provision of broadband communications solutions to the transportation sector. Formed in 2002, the company is now the largest global provider of on-board IP connectivity to the rail industry, with its networks and solutions deployed in Europe, North America, the Middle East and Asia on more than 2000 vehicles. Nomad's notable achievements include being the first company to deploy an aggregated cellular solution, using fixed and mobile backhaul technologies and the first to stream high quality live video to and from moving trains.
